Personal Profile

Driven Software Engineer with hands-on experience developing enterprise-grade systems and complex web applications. Proficient in implementing Clean Architecture using .NET Core and NestJS, paired with dynamic frontends in React and Next.js. Experienced in database optimization, containerized deployments (Docker, Azure), and building resilient microservices. Adept at translating complex requirements into reliable, high-performing software solutions.

Education

University of Moratuwa

2022 - 2026

BSc (Hons) in Information Technology

Sri Lanka

- GPA: 3.54 / 4.00

Technical Skills

Languages	C#, TypeScript, JavaScript
Backend	.NET Core, RESTful APIs, Entity Framework Core, Clean Architecture, Node.js, Express.js
Frontend	Angular, React, Next.js, Redux Toolkit, HTML, CSS
DevOps & Cloud	Docker, Azure, AWS(EC2, S3), Git, Github, CI/CD, Nginx
Databases	SQL Server, MongoDB, MySQL, Oracle Database, PostgreSQL

Professional Experience

Software Engineer Intern

Apr 2025 – Sep 2025

Ceylon Electricity Board (CEB)

Colombo, Sri Lanka

- Spearheaded the modernization of the CEB INFO intranet platform using React, Nest.js, and MongoDB, translating functional requirements into reliable technical solutions.
- Engineered a centralized Reporting Portal utilizing .NET and Oracle Database, developing RESTful APIs to reduce data retrieval time for interactive dashboards by over.
- Architected an AI-powered chatbot leveraging Retrieval-Augmented Generation (RAG) and OpenAI APIs, effectively using AI-assisted tools to improve productivity and code quality.
- Collaborated with cross-functional teams to debug, troubleshoot, and resolve issues across frontend, backend, and database layers, taking ownership of tasks through to delivery.

Projects

SwiftShip - Package Delivery System | .NET 8, Angular 19, SQL Server, RabbitMQ, gRPC

[GitHub](#)

Microservices Architecture

- Designed, developed, and tested a full-stack microservices architecture using C# .NET 8 and Angular 19, focusing on writing clean, scalable, and maintainable code.
- Designed and optimized SQL Server databases,
- Wrote and maintained 118+ unit and integration tests to ensure application reliability,

CinePass - Enterprise Movie Ticket Booking System | .NET 8, ASP.NET Core, SignalR, Next.js, StripeGitHub

Full-Stack Application (Clean Architecture)

- Built responsive, user-friendly interfaces for a full-stack movie ticket booking application
- Deployed real-time seat selection via ASP.NET Core SignalR, preventing inventory deadlocks and resolving concurrency issues across API and database layers.
- Enforced strict request validation with FluentValidation pipelines and integrated third-party systems for automated digital ticket delivery and Stripe payment processing.

SupportIQ - AI-Powered Customer Support Assistant | ASP.NET Core, OpenAI API, Qdrant, MediatRGitHub

AI Integration Project

- Architected a production-grade Web API utilizing C# .NET Core and CQRS via MediatR, improving code maintainability across 4 application layers.
- Integrated OpenAI's structured-output API to auto-classify support tickets, preparing extensive test cases to validate confidence-based auto-escalation features.
- Constructed a Retrieval-Augmented Generation (RAG) pipeline leveraging OpenAI embeddings, grounding all policy answers in retrieved source material to ensure output reliability.

RecruitPro - Multi-Tenant SaaS Job Recruitment Platform | Angular 19, NestJS, Prisma, BullMQ, RedisGitHub

SaaS Platform

- Engineered a production-grade recruitment platform using Angular 19, building responsive UI components with HTML, CSS, and TypeScript.
- Architected core RESTful API workflows, including candidate tracking, automated interview scheduling, and state-managed offer generation.
- Optimized system performance by offloading background tasks to BullMQ and Redis, engaging in code reviews to continuously improve development standards.

WorkCentral - Workspace Management System | NestJS, Next.js, MongoDB, Socket.IO, TypeScriptGitHub

Full-Stack Capstone Project

- Engineered a multi-tenant REST API using NestJS, implementing secure JWT authentication and a granular Role-Based Access Control (RBAC) system.
- Developed a responsive Next.js frontend featuring interactive Kanban boards and analytics dashboards, integrated with Socket.IO for real-time live updates.
- Performed thorough developer testing and authored full-stack unit and integration tests utilizing Jest and React Testing Library to ensure high system reliability.

Certifications

Machine Learning Specialization — Stanford / Coursera	2026
ASP.NET Specialization — Coursera	2025
AWS Cloud Practitioner Essentials — AWS	2025
SQL (Advanced) — HackerRank	2025
Containerize Applications with Docker — LinkedIn Learning	2025
Career Essentials in GitHub Professional Certificate — LinkedIn Learning	2025
